Mounting & Laminating

Professional mounting and laminating will protect and show off your prints to the best of their potential. We use pressure sensitive adhesives which offer the very best protection and longevity to photographic prints. We recommend that all prints 11x14 and larger be mounted for display. Mounting keeps the prints perfectly flat eliminating waves and glare on the print surface.

GatorFoam: Available in black, GatorFoam is a unique, lightweight, structural panel with enhanced integrity, durability and moisture resistance. GatorFoam's exceptional rigidity, surface quality and durability make it the best mounting board for photographs. GatorFoam is much higher quality than the standard Foamcore or MightyCore products.

Thickness: For the best rigidity we recommend using 1/2" GatorFoam for any prints larger than 20x24. If you intend to frame the mounted print, 3/16" is probably the better choice at any size. This ensures that the mounting substrate will not be too thick for the frame.

Edge Tape: We apply a special black tape to cover the foam edge of the GatorFoam, giving it a finished solid look. Available for 1/2" GatorFoam only.

Lamination: Available in **glossy** or **lustre** surface, lamination protects and enhances the appearance of your photograph. Glossy provides a glasslike surface with bright saturated colors. Lustre will diffuse the light where glare is a problem and provide a beautiful soft look. Lamination will lengthen the life of an image by protecting it from moisture, physical damage, dirt, harmful gases and UV light.

Flush Mount vs Matted Mount - A "flush mount" is when the print is mounted even with the edges of the substrate. These are perfect for putting directly into a frame or hanging "as is".

If you intend to window matt and frame, then you will want a "matted mount". The print is centered on the substrate with a border to match your matt size.
